

NORGUARD eagle™

Horizontal and Vertical Lifeline Systems

Delivering the safety and mobility you need to overcome obstacles.

Product Benefits:

- Versatile anchors and fastening sets for multiple attachments
- Floor, side or overhead installation
- Different types of travellers can be removed at any point in the line
- Up to 30ft max span, 2 users
- System versatility to accommodate up to four workers per system
- Can be used with other fall protection equipment such as SRLs, rope, rope grabs and lanyards
- Simple checking for regular maintenance
- Simple assembling

Horizontal and Vertical Lifeline Systems

NORGUARD eagle™

Features and Benefits:

- » The systems attaches to wood, brick, concrete or steel
- » Travellers pass through intermediate brackets for continuous movement and are designed to curve around corners or over obstructions avoiding the need to detach.
- » The flexibility of the intermediate brackets allow for user to walk on both sides of the system
- » The vertical and horizontal lifelines attach to floors, walls or ceilings, and curve around corners.
- » The rigid rails in the system can be center- or side-mounted for any application.
- » They are also engineered to transfer through intermediate brackets smoothly, without hang ups, allowing greater ease of movement for the worker.

Developments in technology have made it possible to combine safety, practicality and comfort. The Norguard Eagle line of cable and rigid rail lifelines adapt to even the most challenging environments.

Whether you are connecting to wood, steel or concrete our horizontal and vertical lifelines offer the mobility to overcome obstacles.

Ideal for:

- » Roofs
- » Railroad and bridge maintenance
- » Industrial and manufacturing
- » Overhead cranes
- » Mining
- » Wind energy and towers
- » Warehouse distribution
- » Airports hangers
- » Transportation
